

[ABSTRACT]

5 A tub cover of an automatic washing machine is disclosed, in which regular and reverse direction guide means are formed in a guide rib of a lower tub cover forming a tub cover, so that a washing water pumped between an inner tub and an outer tub is smoothly provided to the inner tub according to a centrifugal force by a high speed rotation of the inner tub. The tub cover of an automatic washing machine according to
10 the present invention includes a washing water guide means formed in a lower tub cover so as to provide washing water pumped between an inner tub and an outer tub according to a centrifugal force by a high speed rotation of the inner tub.
